## PERSONAL PROJECTS

### Quiz-Portal

[Quiz-Portal web app](#)

This is a multiple quiz portal, with the functionality of two users, Organizer, and participants, with a real-time leaderboard to every quiz. MongoDB is used for the database.

### Developer's Connect

[Developer's connect Backend](#)

This is an API based Web App. It is a Developers Portal to connect to each other, A mini version of LinkedIn. Functionalities like Profile creation, Posting on feed, Commenting on posts, etc. are available.

### Jann-Pass

[JannPass-Project](#)

This is an API based Web App. This Project revolves around the problem statement - "Public movement management " during this pandemic. The project solves the problem stated by issuing an e-pass for every area. Limiting to time slots available and also limiting to the number of passes issued per week.

### Treasure

[Treasure-Backend](#)

This is a web application developed for a college level event organized by MMIL. The core concept of this application is a treasure hunt around the college on the basis of QR codes with real time leaderboard.

### QR-Code Generator

[QR-Code WebApp](#)

This Project is a QR code Generator using conversational forms. Any link or text can be added to QR using this.
